Butterfly Valves

Centred-disc Butterfly Valves

MAMMOUTH

Main applications

- Water supply systems
- Water transport
- Cooling circuits
- Seawater desalination/reverse osmosis
- Flue gas desulphurisation
- General irrigation systems
- Shipbuilding
- Pipelines and tank farms
- Water treatment

Fluids handled

- Service water
- Seawater
- Cooling water
- Drinking water
- River water, lake water and groundwater
- Radioactive fluids

Operating data

Operating properties

Characteristic	Value
Nominal pressure	6/10/16/20/25
Nominal size	DN 1050 - 4000
Min. permissible temperature [°C]	0
Max. permissible temperature [°C]	+80
Vacuum operation	Contact KSB.
Max. permissible flow velocity at operating pressure	Actuator rated for 2 m/s Higher velocities on request.

Design details

Design

- Flanged body with flat faces – T5: DN 1050-4000
- Installation with stem in a horizontal or vertical position (actuator on top)
- Downstream dismantling possible
- Reduced face-to-face length: series 215, 254, 280, 400 or 520 mm, depending on DN.
- Dead-end service with counter flange possible
- Design to EN 593 and ISO 10631
- Top flange to ISO 5211
- Marked in accordance with EN 19
- Absolutely tight shut-off (no leakage visible to the naked eye) in either direction of flow in accordance with EN 12266-1, leakage rate A, ISO 5208, category A, and all standards which allow a leakage rate (e.g. ANSI/FCI 70-2 Class 6).
- Unless indicated otherwise, the normal mating dimensions of MAMMOUTH are suitable for the permissible pressure class (PS).
- Body with polyurethane coating, thickness 80 µm, colour: RAL 5002, blue.
- Valve discs: nodular cast iron, epoxy-coated as standard (thickness: 80 µm, colour: brown RAL 8012) or hard rubber coated (other materials on request)
- The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 97/23/EC (PED) for fluids in Groups 1 and 2.
- Valves with actuators can meet the requirements of the 2006/42/EC Machinery Directive for partly completed machinery.
- The valves meet the requirements of the REACH 1907/2006 regulation. None of the substances listed in the candidate list and in Annex XIV of the regulation is present in a concentration above 0.1 % (w/w) (Article 33/REACH).

Variants

- Up to DN 4000 on request
- Anti-fluttering device (providing stabilisation in case of unsteady flow)
- Valve disc locking device
- Support feet
- Dismantling joints and expansion bellows
- ACTELEC electric actuators
- ACTAIR / DYNACTAIR pneumatic actuators
- HQ hydraulic actuators
- Counterweight actuator
- AMTROBOX limit switch box
- AMTRONIC valve controller with compressed air supply via directional control valve
- SMARTRONIC intelligent positioner
- ATEX design in compliance with the 94/9/EC Directive

Body materials

Overview of available materials

Material	Material number	Type	DN	KSB code
EN-GJS-400-15 (JS1030)	JS 1030	T5	All	3g
ASTM A536 Gr. 60.40.18				
1.0619 ASTM A216 Gr WCC	Carbon steel	T5	All	1
Other standards on request				

Product benefits

- Spherically machined valve disc with rounded sealing contour
 - ensures durable and permanently tight shut-off
- Keyed connection between stem and valve disc
 - Dry stem, no contact with fluid handled
- Sealing to atmosphere and tight shut-off are ensured,
 - even when the actuator has been removed
- Marking indicates position of valve disc
- Valve equipped with stainless steel bearing bushes with reinforced PTFE coating
- The elastomer liner provides tight sealing at the flanged line connections, eliminating the need for a flange gasket.
- Valve disc geometry optimised for reduced pressure losses
- Options
 - Anti-fluttering device (providing stabilisation in case of unsteady flow)
 - Valve disc locking device
 - Support feet
- Thrust insert for reduced friction
 - Absorbs the weight of the valve disc when the valve is installed with the stem in the vertical position
- Valve certified to
 - WRAS for drinking water applications, with XC elastomer liner
- Valve actuation options:
 - Manual
 - Electric
 - Pneumatic
 - Hydraulic

Actuator mounting

The torque for this type of large-diameter valve depends on the hydraulic characteristics of the system.

The selection of actuators given below for lubricating fluids typically applies to maximum flow velocities of 2 m/s.

Higher flow velocities and further actuator/valve combinations are possible, depending on the operating conditions and hydraulic characteristics. Request particulars.

Manual actuation: manual gearboxes

Variants

Variants

Valve disc locking device

In 0° or 90° position after actuator has been disengaged
Not available for DN 1050 to 1200 PN 10 (series 216 and 254)

Valve handling unsteady flow

Anti-fluttering device

On valves handling unsteady flow, an anti-fluttering device (flexible stops) located on the lower stem prevents any play between the actuator and the valve disc.

All valves equipped with an anti-fluttering device must be fitted with a valve disc locking device.

Not available for DN 1050 to 1200 PN 10 (series 216 / 254).

Valve of face-to-face length l1 280: $h2' : h2 + 72$

Valve of face-to-face length l1 400: $h2' : h2 + 65.5$

$h2$: see Dimensions table

Support feet

Note: the support feet must not be fastened to the floor.

They must remain free to move.

Valve of face-to-face length l1 216 and 254: $x3 = 330$

$x4 = 450$

Valve of face-to-face length l1 280 and 400: $x3 = 350$

$x4 = 510$

$x2$: see Dimensions table

Dismantling joint and expansion bellows

Dismantling joint

Expansion bellows

Variants – actuators

ACTELEC electric actuator

ACTAIR / DYNACTAIR pneumatic actuators

HQ hydraulic actuator

Counterweight actuator

Installation information

Connections

Unless indicated otherwise, the standard mating dimensions of MAMMOUTH are suitable for the permissible pressure class (PS). The flange dimensions are in accordance with the following standards:

- ISO 7005 PN 20
- EN 1092
- AWWA C207 Cl. B, D and E, edition 94
- ASME B16.47 Class 150 Series A
- ISO 2084
- Other connections on request.

Dead-end service and downstream dismantling

Downstream dismantling

For downstream dismantling, successively loosen diagonally opposed tie rods.

Dead-end service

Bolting

For compliance with the Pressure Equipment Directive, the connecting elements between the valve flanges and the piping flanges must be selected in accordance with the EN 1515-4 standard ("Selection of bolting for equipment subject to the Pressure Equipment Directive 97/23/EC") and any plant regulations governing the application in question.

Length of tie rod $L = l1 + 2e + 2f$

L: minimum length of tie rods

l1: face-to-face length of butterfly valve

e: flange thickness (customer-specific)

f: thickness of nut + standardised overhang of tie rod

Minimum length of bolts $A = l2 + e + f$

A: minimum length of bolts

l2: valve flange thickness

e: flange thickness (customer-specific)

f: thickness of nut + standardised overhang of bolt

Bolting is not included in our standard scope of supply.

Bolts at stem passage

Bolt length at stem passage

$A = e + X$

A: max. length of bolts

X: max. thread engagement depth

e: flange thickness (customer-specific)

B: min. thread length > A-e

Flange dimensions

The valves can be installed between all commercial mating flanges and line connections without requiring any flange gaskets. The elastomer liner alone provides a tight seal at the flange connections. Please verify that the connection meets the requirements given below.

Ø 2: max. permissible flange face diameter
Ø 3: min. permissible flange face diameter

Dimensions table

[mm]

DN	NPS	Max. permissible diameter Ø2		Min. permissible diameter on flange face Ø3		Min. Ø at a distance of 10 mm from the flange face Ø4		Min. Ø at a distance of 20 mm from the flange face Ø5		Min. permissible raised face Ø of flanges with raised faces
